

## Ski & Board Tuning

# Reichmann presents innovations at ISPO in Munich

**For the 46<sup>th</sup> time, Reichmann Ski & Board Tuning was an exhibitor at the international trade show for the sports business in Munich to present the visitors their latest developments. The new all-in-one grinding machine PROFI B VARIO and the service robot SF-4 with edge module received special attention of the industry visitors.**

According to information of the Munich Trade Fair Centre, the ISPO 2017 registered a record attendance of about 85,000 visitors, especially due to a growth in number from abroad. Reichmann Ski & Board Tuning used this special occasion to let the visitors experience the newest innovations by Reichmann.

### **New grinding technology “New Base Technology”**

A special highlight was the new all-in-one grinding machine PROFI B VARIO. This compact working station enables pre-grinding, structuring and edge grinding in one machine. So, the PROFI B VARIO saves time and space in the service workshop and at the same time convinces through a very good grinding result in combination with an attractive price. This is based on the newly developed grinding technology “New Base Technology” which is registered for patent by Reichmann and revolutionises the traditional belt grinding technology. Due to the specially developed pre-grinding and structuring belts, the PROFI B VARIO achieves a high-quality grinding result comparable to stone grinding, which impressed the visitors of the trade show.

### **Service robot with double stone and edge module**

After the successful presentation of the service robot SF-4 with double stone module at ISPO 2016, Reichmann was able to present the extension this year: the SF-4 with double stone and

edge module. So, the robot now shows an even higher efficiency and especially attracts service workshops with a high amount of service work.

### **Successful fair balance**

As one of the first exhibitor at ISPO in Munich, Reichmann uses the show each year as a platform to convince the industry visitors of the functionality and the grinding results of the Reichmann machines. This year, the booth was again highly frequented and the Reichmann team was pleased with the numerous positive customer feedback.
