

Reichmann Ski & Board Tuning

Online premiere of the Reichmann Slope Master

On February 1st, the latest machine innovation from Reichmann was presented to the sports retailers and rental companies in an online premiere. The new Slope Master is probably the smallest grinding robot for skis and snowboards on the market. In addition to the particularly compact size, it has numerous other exciting features for the user.

Small in design – big in performance

The new Slope Master combines numerous user advantages in an extremely compact housing. The reduced structure makes the installation and maintenance of the robot particularly easy. The possibility of dressing the grinding stone for skis in different zones for pre-grinding and structure grinding means that the user can achieve the same high-quality grinding result with just one stone as a service robot with two grinding stones. This saves time, material and space in the workshop. As a further highlight, the Slope Master can be combined with the DTS-U II RACE edge grinding machine to create a fully automatic robot for base and edge grinding. The robot can be used universally: from cross-country skis to alpine skis or extra-long jump skis to snowboards.

Presentation at ISPO Digital 2021

As one of the first longstanding exhibitors at ISPO in Munich, Reichmann remained loyal to the fair in this extraordinary year. In a virtual brand room, the online trade fair visitors were able to discover the new Slope Master and other company highlights and communicate via live chat. “Of course, an online trade fair cannot replace personal contact and a live demonstration of the machine. Nevertheless, it was important to us to be part of ISPO Digital despite the difficult circumstances and to use the platform as a supplement to our own channels,” says Stefan Reichmann.

Personal demonstration appointments by arrangement

The new compact grinding robot has been available online since February 1st at the microsite www.slopemaster.de/en. As an additional service, Reichmann also offers individual demonstration appointments in the showroom in Weissenhorn after personal consultation and taking into account the currently applicable hygiene regulations.
