

Your benefits at a glance:

- Quick & easy determination of the correct ski boot size for ski rental & sale.
- No special knowledge required for use.
- Higher customer satisfaction & fewer returns.
- Differentiation from online retail.
- Improved performance and more fun for skiers.

Technical Data

Item-No. Simplex	2003555
Item-No. Duplex	2003967
Prices (net):	
Simplex	5.490,00 €
Duplex	6.380,00 €
Retrofit set Simplex to Duplex	890,00 €
Additional remote control	29,90 €
Shipping & packaging fee GER+AT+I+NL	89,00 €
Shipping & packaging fee CH	119,00 €
Dimensions (W x D) in mm	700 x 950 mm
Maximum load in kg	150
Connecting voltage	230 V, 1PH/N/PE, 50 Hz

THE NEW SKIMULATOR

Fitting device for perfect fitting ski boots

SKIMULATOR

The innovation for the optimum ski boot test.

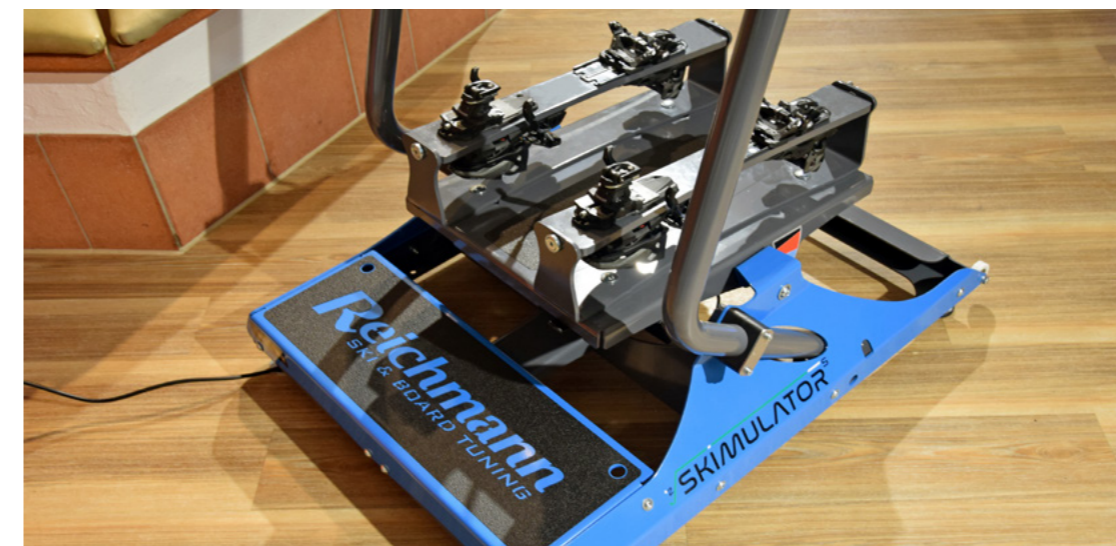

Ill-fitting and, above all, oversized ski boots with too much forefoot clearance are a widespread problem among skiers. Ski boots that are too big lack the necessary support, which impairs performance and skiing enjoyment. This problem is a thing of the past with the SKIMULATOR.

The SKIMULATOR is an innovative tool that imitates the gradient (alpine) or incline (touring) of a ski slope. This allows the customer to determine the optimum ski boot size and shape under real-life conditions and achieves a much more precise result.

With this service, sports shops or rental companies can reduce the number of returns and increase customer satisfaction. In addition, the exact ski boot size determination sets specialist retailers apart from online retailers and thus creates a competitive advantage.

precise and simple

Customers are clipped into the SKIMULATOR's integrated ski bindings and brought into the typical downhill or uphill position. A three-colour display shows the gradient in accordance with international slope standards (blue, red, black). The optimum fit is achieved when the toes are in a slightly forward or backward inclined position in the ski boot. Otherwise the ski boot is too big.

two versions available

The SKIMULATOR is available with simplex binding rails for alpine ski boots or alternatively with duplex binding rails for alpine and touring ski boots. Both versions have a 3-way adjustable foot/leg distance and a safety lever. The ski bindings are adjustable for sizes from 32 to 48.

flexible and space-saving

The SKIMULATOR has a small footprint of just 0.67 m² (duplex). The four levelling feet are adjustable to adapt to the floor space. The fitting device is also equipped with transport castors for easy, ground-level movement.
